MOMENTUM

Protect your networks and critical assets with Juniper SRX

Security from edge to endpoint

A next-generation network requires next-generation security. Powered by the Junos operating system, Juniper's SRX Series Firewalls are among the most effective in the industry.

Managed via the Juniper Security Director Cloud, they offer a unified management experience with consistent policy enforcement and real-time, ecosystem-wide visibility.

Optimize bandwidth, traffic prioritization and security with powerful AI that accurately predicts and stops threats before they stop you.

Your security perimeter has evolved. We'll help your business evolve with it.

HIGHLIGHTS

Security designed with high-impact use cases in mind

AI-driven anomaly detection and mitigation

Intelligent, automated and accurate root cause analysis

Comprehensive asset visibility, including location and analytics

A seamless and secure end-user experience

Intelligent, centralized full-stack security for the hybrid network

Leverage the power of artificial intelligence and the cloud to optimize both your network and security experience with centralized visibility, unified policy management, and secure access. Protect against both known and unknown threats with intelligent, real-time detection and prevention while keeping your users connected and productive.

Manage security anywhere and everywhere

Create and apply policies across your entire ecosystem through an intuitive, centralized dashboard that provides you with full, real-time visibility of all your environments. Apply granular policy control and manage all phases of the security policy lifecycle across virtual, physical, containerized and cloud services.

Next-generation security

Employ powerful security architecture that includes user identity management, application control, intrusion detection and prevention, real-time threat intelligence, anti-malware, web filtering, SSL encryption and advanced threat detection.

Marvis AI

Streamline end-to-end impact analysis and risk management with Marvis, Juniper's powerful AI assistant. Work with Marvis to correlate events across your networks and provide not only enhanced security but a better overall user experience via rapid, cross-domain fault isolation and resolution.
