# MOMENTUM PULSE

Gain real-time visibility into every circuit in your network

Proactive circuit monitoring that keeps you informed and in control

Managing circuits across locations and carriers is hard when you can't see them. You're relying on different providers, tools, and portals. When something degrades, you don't know until users start complaining or systems fail. Without visibility, small issues go unnoticed until they become outages that impact your customers.

Momentum Pulse monitors your DIA circuits around the clock. See real-time health status, get notified when issues arise, and track circuit states from a single portal. When one of your Momentum DIA Circuits goes down, a ticket is created by our team, and you are automatically notified and resolution begins.

Momentum Pulse is a fully managed service. We handle provisioning, monitoring, and carrier coordination for all Momentum DIA monitored circuits. When a circuit goes down, we open a provider ticket and work it through to resolution, keeping you updated along the way. Via, either our portal or automated ticket updates.

HIGHLIGHTS

Real-time circuit health visibility
ICMP-based monitoring shows you the status of every circuit, all the time.

Proactive outage alerts
Get email notifications the moment a circuit issue is detected.

Automated ticket creation
Outages trigger trouble tickets routed directly to Momentum Support.

Self-service portal
If you're an existing voice customer, you now have more control with voice and data combined in one unified portal.

What's included with Momentum Pulse

Momentum delivers Pulse as a managed monitoring service, from setup to ongoing support.

See every circuit from one dashboard

Real-time status across all your Momentum DIA circuits. No jumping between tools or carriers.

Catch issues before they become outages

Continuous ICMP monitoring detects problems early. You see it, act on it, and stay ahead.

Get notified the moment something changes

Email alerts go to your designated contacts as soon as a circuit goes down.

US and international coverage

Supports Ethernet-based DIA circuits across domestic and global locations.

Skip the back and forth with carriers

When issues occur, Momentum opens provider tickets and manages resolution. You get updates without chasing anyone.

Stay informed without doing the work

Momentum handles monitoring, alerting, and carrier coordination. You get visibility and updates. We handle the rest.

Why Momentum?

Built by a team that manages networks for a living

One partner from provisioning to resolution

8,000+ managed connections and 750+ carrier relationships

See circuit health in real time from one dashboard

Add proactive monitoring to your Momentum DIA circuits. Talk to us about Pulse.
