

HEALTHCARE

Add network, voice, security, and engagement to every care site

The infrastructure modern care depends on

Healthcare runs on connected systems, regulated data, and round-the-clock access. There is no room for downtime and no tolerance for risk. Most providers manage more endpoints, cloud workloads, and compliance pressure than ever, often with leaner IT teams and aging infrastructure spread across dozens of sites.

Momentum brings network, voice, security, and patient engagement together into a single managed service, so you can deliver regulated, distributed care. Whether you run a single hospital campus or a 300+ clinic network, the model stays the same.

Why Momentum?

Healthcare-specific expertise
Designed for HIPAA, ePHI, and regulated care environments with named resources on every engagement.

One end-to-end partner
Network, voice, security, and engagement managed by one team, so IT can focus on care instead of coordinating vendors.

Proven at multi-site scale
Momentum manages connectivity across 36,000+ enterprise locations, including specialty clinics and 300+ site healthcare networks.

HIGHLIGHTS

Ensure clinical uptime:
Resilient networks with failover and wireless backup keep EHRs, telehealth, and connected devices online.

HIPAA-aligned across every layer: Network, voice, and data handling are designed around HIPAA and ePHI requirements from day one.

Build patient engagement into Teams: Integrate compliant texting, contact center, and call routing into your clinician workflows.

Zero Trust access across every site: Identity-based access and network segmentation protect ePHI without slowing down care.

One managed partner:
Network, voice, security, and engagement all managed by a single partner.

One partner for connectivity, communication, engagement, and security

Designed for regulated, distributed care environments with no room for downtime.

Networks that keep patient care moving

Communications at the speed of care

CONNECT

24/7/365 clinical uptime
Intelligent routing and 5G wireless backup keep EHRs, telehealth, and devices online.

Reach every care setting
5G fixed wireless extends connectivity to rural clinics, mobile units, and new sites without waiting for fiber.

Consistent performance across sites
One managed backbone across hospitals, clinics, and remote facilities, with visibility into every connection.

Zero Trust for clinical teams
Cato SASE replaces legacy VPN with identity-based access from any device, anywhere.

Segmented clinical, guest, and IoT traffic
Managed SD-WAN from Cisco Meraki, Juniper, or Arista keeps medical devices isolated from public networks.

Encrypted voice and GCC High
Sensitive conversations stay protected while meeting federal compliance needs.

COLLABORATE

Clinician-to-patient calling from any device
Teams Phone, Operator Connect, and Direct Routing connect care teams and patients without extra hardware.

Continuity through outages
Zero-Click failover keeps critical calls live during network disruptions.

Replace Legacy PBX without disruption
Cloud voice and Teams-native calling replace aging phone systems while keeping clinical workflows intact.

ENGAGE

HIPAA-compliant patient messaging
Texting, call recording, and automated reminders reduce no-shows and keep communication on record.

Centralize patient access
Teams contact center and attendant console unify scheduling, triage, and coordination in one interface.

Operational visibility from call data
Call analytics surface staffing gaps and patient flow patterns across every site and department.

SECURE

Protect patients, data, and every conversation

Fewer missed appointments, better coordination

One partner to connect, secure, and manage every care site

Find out where your sites have gaps in connectivity, compliance, or coverage. Talk to an expert today.
